# Patient Setup Photo Tutorial

This tutorial is intended to be an easy to follow step-by-step guide for using the "Patient Setup" photo feature. It covers all steps involved in taking, managing and exporting patient setup photos. The intent is that after completing this tutorial you will have gained the knowledge and understanding necessary to fully use this feature.

1. Open the decimal3D app on the iPad and login with your unique username and password. The username and password is the same as what is used to sign in to p.d.

2. Select *New Patient* in the top right hand of the Patient Management Screen
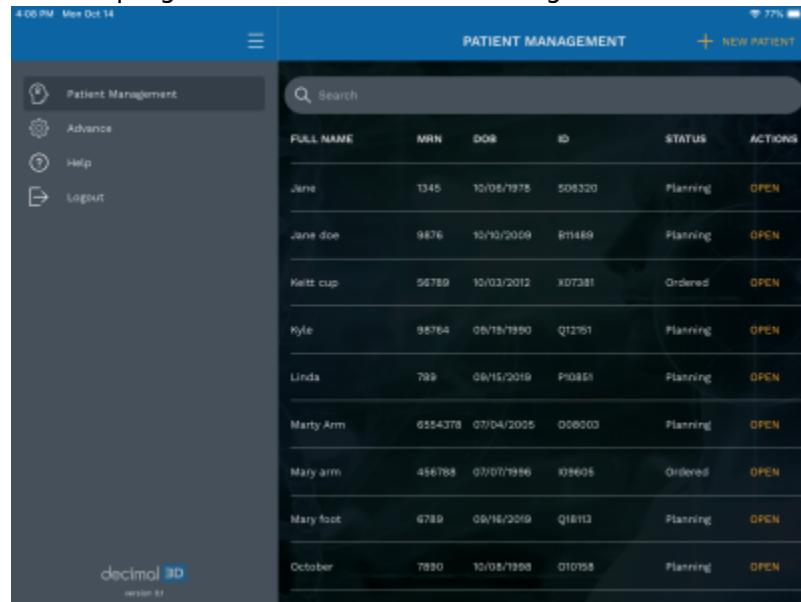

3. Enter all of the requested information for a patient and press *submit*
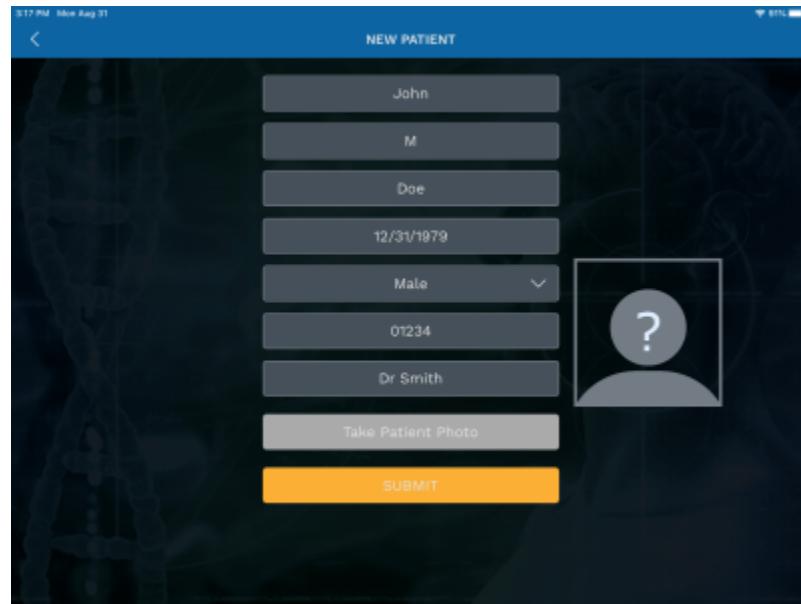

4. From the patient profile, in the top right, select *Patient Setup*
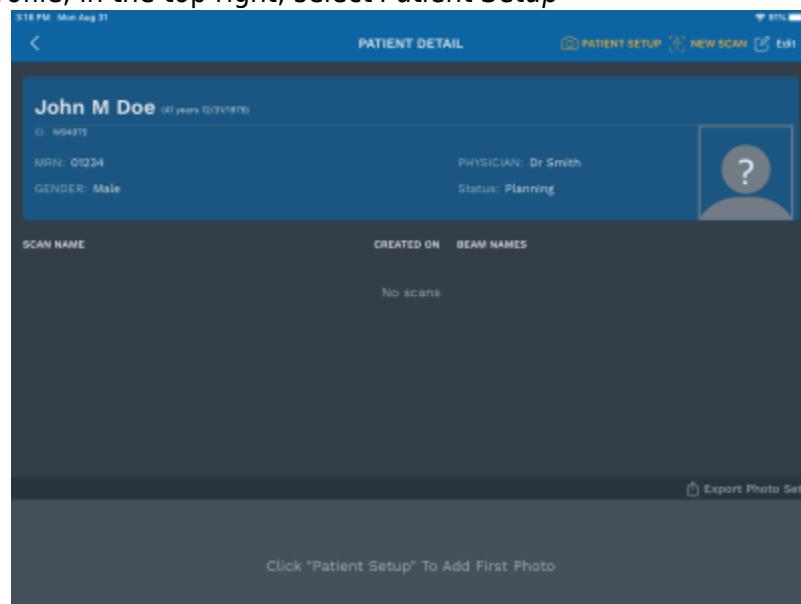

5. Take a photo (note: this specific photo has nothing to do with patient setup)

6. Select *Use Photo* to save the taken photo to a patient

7. Repeat the *Patient Setup* process for as many photos as you'd like until you have more than one:
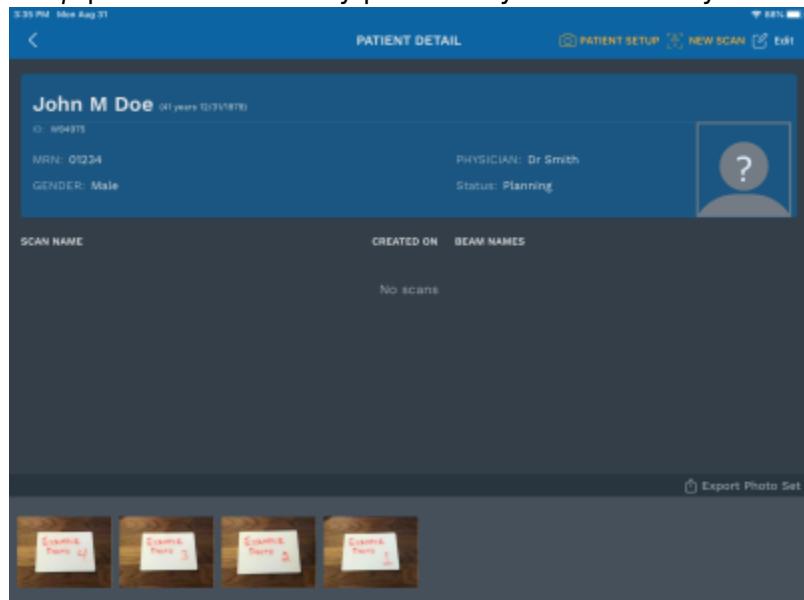

8. To view a photo in full screen, select any photo

9. Press *Done* to return to the patient details screen
10. To delete any photo, long press the photo
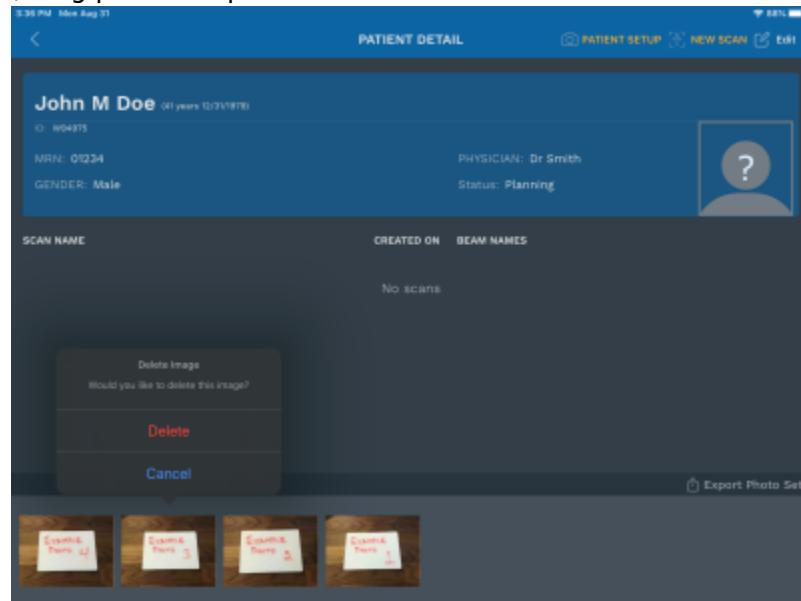

11. Select delete and the photo will be removed
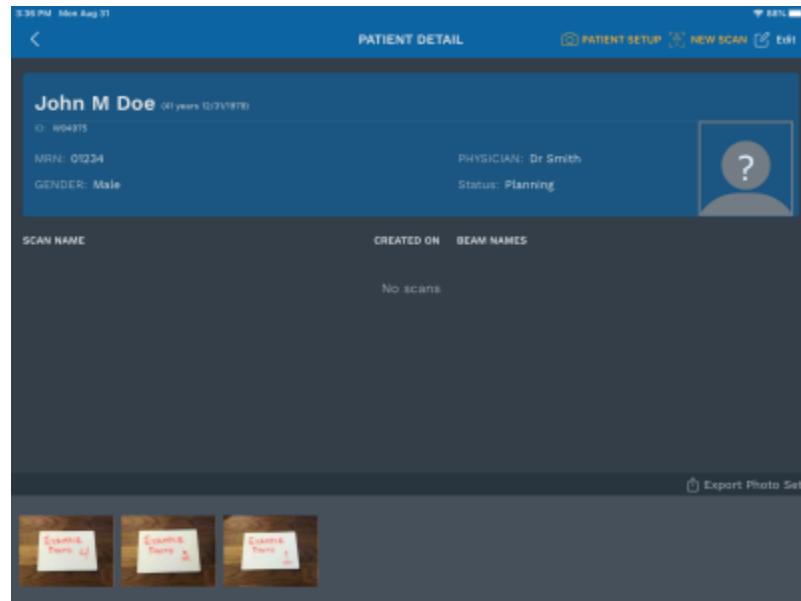

12. To export the photo set, select *Export Photo Set* and wait while your photos are prepared
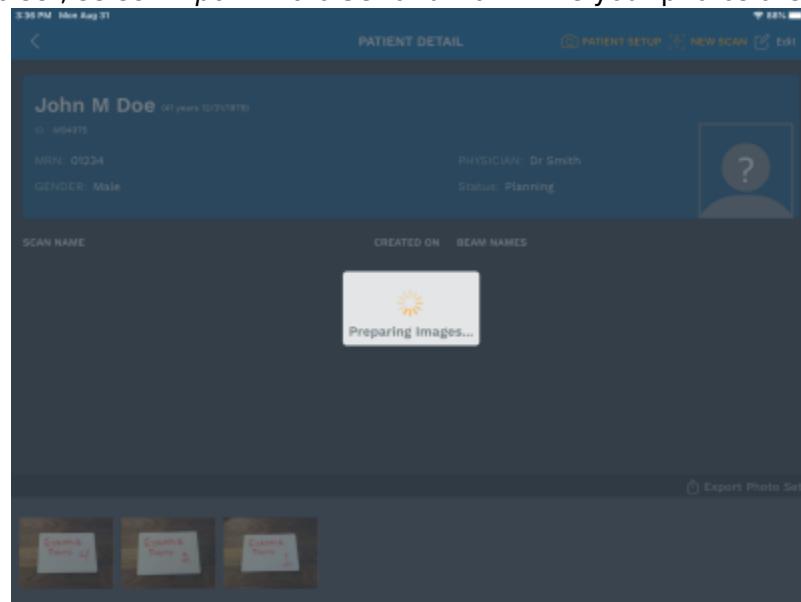

13. With an SD Card plugged into your iPad, select *Save to Files*
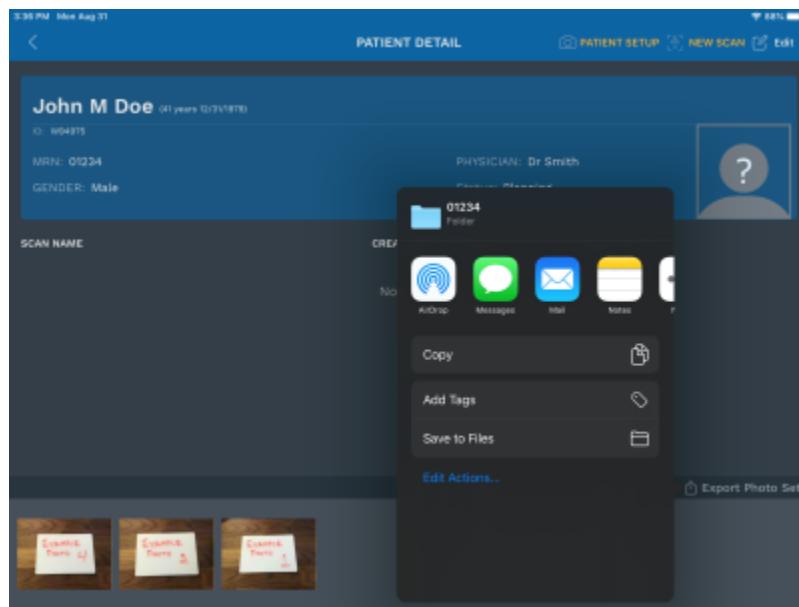

14. Select the SD Card from the list of locations and press *Save*
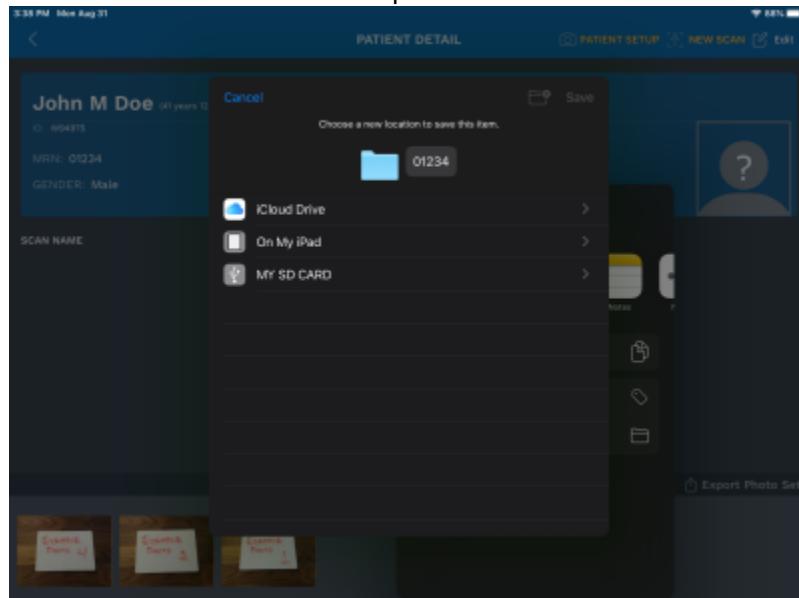

15. If there are no errors, you will be returned to the patient detail screen.
