

Shipping Estimate Calculator

The Status page provides a tool for estimating the date upon which a future order will ship. Simply click the “Shipping Estimate Calculator” button on the Status page then:

1. Select a part type from the dropdown
2. Set the date for which the order will be placed
3. Check/uncheck the box indicating what time of day the order will be placed

Note: For existing jobs, the estimate shown in the “**Ship Date**” column will be more accurate.
