

Users can choose to manually clear the disk cache or let it clear oldest data as the cache fills. Refer to [Data Management Storage and Caching](#) for more information.

Network Disk Cache

The network disk cache is where calculation results are stored on a network drive where all users can access. If calculation data is not found on the local client cache the network cache will be checked for the calculation results. The recommended storage size for this cache is 25GB.

Users can choose to manually clear the disk cache or let it clear oldest data as the cache fills. Refer to [Data Management Storage and Caching](#) for more information.

Patient Storage

The directory for the decimal eRT patient database and file store. The default location is a folder above the application directory installed via the [decimal Launcher](#) on the local workstation. Setting this to a shared network resource allows multiple users to share a common patient database.

Refer to [Data Management Storage and Caching](#) for more information.
