

make this page much more useful and pretty

Thinknode Errors

- “**provider terminated unexpectedly**”:
 - During feasibility: calculation grid is too dense and crashed the provider. Make calc grid coarser
- “**401**”:
 - Session token has expired, close planning and relogin.
- “**50X**”
 - Any 500-504 error codes mean there was a temporary issue on the Thinknode side. Closing, reopening, and retrying what gave the 50X error should resolve the issue.
