🔧 **Fix Me!** make this page much more useful and pretty

Thinknode Errors

- **"provider terminated unexpectedly"**:
    - During feasibility: calculation grid is too dense and crashed the provider. Make calc grid coarser
- **"401"**:
    - Session token has expired, close planning and relogin.
- **"50X"**
    - Any 500-504 error codes mean there was a temporary issue on the Thinknode side. Closing, reopening, and retrying what gave the 50X error should resolve the issue.
