

Plan History

The *Plan History* allows the user to see all changes and modifications made to a plan. Each modification to a plan will result in a new *Revision* of the plan (note: in a complex plan there may be hundreds of revisions). If the user is not satisfied with the results of a modification they may go back to any of the previous *Revisions* and make that instance the active instance (note: this will cause another *Revision* to be created for the reversion). Below is a walk through and more detailed explanation of this feature.

1. Open the *General* block from the Plan Overview
2. Expand the *History* tree node
 1. The number of plan revisions will be listed (In the below example there are 36 revisions)
3. Select the *More Details* option in the bottom right hand corner

1. The summary of the latest revisions will expand to the right

General	Revision 36: view make active
1	created: 2016-10-04 09:21:34

	summary: show

4. The user can now review the various revision summaries

1. Clicking the blue *show* link will expand that particular version of the plan and explain what was changed
2. “op”: is the operation performed in this version that differs from the previous version (i.e. delete: an item was deleted)
3. “path”: is the item in the treatment plan data that had the operation performed
4. “val”: is the value in the path that had the operation performed

5. If the user would like to return to this version they may do so by clicking the blue *make active* link

6. The user can close the expanded version by clicking the blue *hide* link
