

Plan History

The *Plan History* allows the user to see all changes and modifications made to a plan. Each modification to a plan will result in a new *Revision* of the plan (note: in a complex plan there may be hundreds of revisions). If the user is not satisfied with the results of a modification they may go back to any of the previous *Revisions* and make that instance the active instance (note: this will cause another *Revision* to be created for the reversion). Below is a walk through and more detailed explanation of this feature.

1. Open the *General* block from the Plan Overview

2. The summary of the latest revisions will expand to the right

3. Expand the *History* (this is not mandatory)

1. The number of plan revisions will be listed (In the above example there are 4 revisions)

4. The user can now review the various revision summaries

1. Clicking the blue *show* link will expand that particular version of the plan and explain what was changed

2. “op”: is the operation performed in this version that differs from the previous version (i.e. delete: an item was deleted)

3. “path”: is the item in the treatment plan data that had the operation performed

4. “val”: is the value in the path that had the operation performed

5. If the user would like to return to this version they may do so by clicking the blue *make active* link

6. The user can close the expanded version by clicking the blue *hide* link

```
Revision 36: view make active
created: 2016-10-04 09:21:34
by: Kellt Mobile
summary: hide
{
  op: update,
  path: [ captured scope, directive ],
  val: {
    some: 57f2736f00c0b9f2c378152e06cfd09
  }
}
{
  op: update,
  path: [ captured scope, site ],
  val: {
    some: 57dbebec00c0102cd41ea85de124b527
  }
}
```
