2025/12/08 06:04 1/6 User Logging

User Logging

This page serves as a high level reference guide to what .decimal logs for user interactions with our software. There are 3 different sections detailed here for the use cases of user logging:

- 1. **User Authentication for Auth0:** .decimal uses Auth0 as its user authentication service. As such Auht0 maintains the user login logs for every user.
- 2. **Customer Applications:** Customer Applications include .decimal developed applications used by end clinical users that are downloaded and installed on the customer's local computers.
- 3. **decimal Direct:** Users will interact with the decimal Direct website to perform certain tasks. These interactions are logged for each user. In addition, Customer Applications connect to decimal Direct and some actions of the application may be logged.

User Authentication (Auth0)

Note: This section is applicable to Auth0 user logins only.

Auth0 user logins use the user's email as the user name. If your username is not an email you have a legacy login and this section is not applicable.

.decimal uses Auth0 as its user authentication service. Auth0 logs user actions including:

- Successful & Failed Logins
- Successful Logouts
- Blocked Account (after too many login attempts)

Note: These logs are not directly accessible by end users, but may be provided by .decimal staff upon request.

See below for example logs for common Auth0 events:

Successful login.json

```
"date": "2022-05-11T12:13:02.783Z",
   "type": "Success Exchange",
   "client_id": "<REDACTED>",
   "client_name": "decimal Launcher",
   "ip": "<REDACTED>",
   "user_agent": "Electron 5.0.13 / Windows 10.0.0",
   "hostname": "dotdecimal.us.auth0.com",
```

2025/12/08 06:04 2/6 User Logging

```
"user_id": "<REDACTED>",
    "user_name": "<REDACTED>",
    "isMobile": false,
}
```

Incorrect password.json

```
{
    "date": "2022-05-11T13:24:10.066Z",
    "description": "Wrong email or password.",
    "connection": "decimal",
    "client name": "decimal Launcher",
    "ip": "<REDACTED>",
    "user agent": "Electron 5.0.13 / Windows 10.0.0",
    "details": {
    "error": {
      "message": "Wrong email or password."
    }
    },
    "user id": "<REDACTED>",
    "user_name": "<REDACTED>",
    "isMobile": false
}
```

Blocked_user.json

```
{
    "date": "2022-05-11T13:54:35.190Z",
    "description": "User (<REDACTED>) attempted 10 consecutive logins
unsuccessfully. Brute force protection is enabled for this connection,
further attempts are blocked from this IP address for this user.",
    "connection": "decimal",
    "connection_id": "<REDACTED>",
    "client_id": "<REDACTED>",
    "ip": "<REDACTED>",
    "user_agent": "Electron 5.0.13 / Windows 10.0.0",
    "hostname": "dotdecimal.us.auth0.com",
    "user_id": ",
    "user_name": "<REDACTED>",
    "isMobile": false
}
```

Customer Applications

Customer Applications include .decimal developed applications used by end clinical users that are downloaded and installed on the customer's local computers. These may include, but are not limited to: p.d, decimal3D, decimal Launcher, and decimal eRT. See each application below for an example activity log.

p.d

p.d logs the local user activity and records the following information to its local application database:

Log Item	Description		
username	The username/email of the user performing the action		
patientName	An encrypted string for the patient the log entry applies to		
medicalRecordNumber	ber An encrypted string for the patient's MRN the log entry applies to		
uniquePlanName	An encrypted string for the plan the log entry applies to		
planName	An encrypted string for the plan the log entry applies to		
logDate	The local date time of the log entry		
logEvent	The event that the log entry is for. logEvents include, but are not limited to: -User log in -User log out -Plan Open -Plan Save -Plan Close -Order placed to decimal Direct -Local and DICOM AE file export (e.g.: DICOM) -Patient deletion		

decimal3D

decimal3D logs the local user activity and records the following information to its local application database. This information is exportable from the Advanced menu option within the application.

Log Item	Description
User ID	The username/email of the user performing the action
Action	The action the user performed (see below for an itemized list)

2025/12/08 06:04 4/6 User Logging

Log Item	Description
	The local date time the action was performed. Actions include, but are not limited to: -User log in attempts -User log in success/fail -User log out -View patients list -View patient info (including patient MRN) -Create new scans/contours -Orders placed to decimal Direct (including beam name) -Local and AE file exports (e.g.: DICOM) -Patient deletion

decimal eRT

decimal eRT logs the local user activity and records the following information to its local patient database. This information is exportable from the Organization Configuration \rightarrow Export Logs block within the application.

Log Item	Description		
Hardware ID	Local Windows computer name		
ID	The ID of the corresponding Data Type of the log entry		
Date	The date time of the log entry		
Log Event	The event that was logged. Log Event's include, but are not limited to: -Import Patients -View Patients -Open Patients -Import Courses -Update Course -Create Plans -Update Plans -Clone Plans -Open Plans -Update Organization -Export DICOM files locally -Export DICOM files to AE service -Approve Plans -Order files to decimal Direct -Export Reports		
Data Type	What data caused to the log entry. Data Type's include, but are not limited to: -Application (root level interactions without a specific data to link to) -Organization -Patient -Course -Plan -Export -Order		
Username	The users first and last name that caused the log entry		

2025/12/08 06:04 5/6 User Logging

decimal Direct

Users will interact with the decimal Direct website to perform certain tasks. For each logged interaction in Direct the following is recorded:

Log Item	Description	
UserID	Internal .decimal user ID that links to a user	
Log Route	The API route (i.e.: action taken) for the log	
Parameters The parameters of the action		
TimeStamp	The data time (as Eastern Time) of the action	

See below for the outline of what user interactions are recorded.

Normal User Interactions

A normal user interaction includes any non-elevated user tasks that are performed. Normal user interactions that are logged include:

Log Category	Log Event	
Login (logacy non AuthOusers only)	Login attempt	
Login (legacy non-Auth0 users only)	Login success/fail	
	Order File Upload	
Ordering	Order Placed	
User Preferences	Email Notifications Changed	
oser Preferences	Password changed (legacy non-Auth0 users only)	

Manager Interactions

A manager user interaction includes any elevated user tasks that are performed by the site manager within the Management pages. Manager user interactions that are logged include:

Log Event	Captured Data	
Site Management	Site Info (address) Update	
Application Management	Version Change	
	User Add	
Licar Managament	User Remove	
User Management	User Info Edit	
	User Permissions Edit	

Application Integrations

Other .decimal applications that connect to decimal Direct and .decimal logs some integration connections for diagnostic trouble shooting. These interactions include and capture:

Log Event	Captured Data	
	User	
Application Login	Date Time	
Application Login	Site ID	
	Application	
Website Legacy User Login	User	
website Legacy User Login	Date Time	
Website Auth0 User Login	User	
website Autilo Oser Login	Date Time
